PROENERGY RELOCATES TWO FRAME 9E UNITS FROM EUROPE TO AFRICA

ProEnergy Services recently completed the dismantling and relocation of two GE Frame 9E gas turbines and balance of plant, from Europe to Africa.

ProEnergy managed and coordinated all activities involved in getting the power plant dismantled, tagged, crated and on board a ship, which headed to its destination in record time. The equipment has since arrived in Africa where the engineering, procurement and construction of the new site is set to begin.

“We take pride in our willingness and ability to take on unique projects. Our team was able to execute this seamlessly by working closely with our Client to ensure every goal was achieved,” said ProEnergy President Jeff Canon.

ProEnergy Services is an integrated service provider that delivers cost-effective, safe and reliable services to the global energy industry. The company has U.S. offices in Sedalia, MO; Houston, TX; and Fort Collins, CO; and international locations in Argentina, Venezuela, Brazil, Panama, Pakistan and Angola. More information is available on its website at www.proenergyservices.com.
