## **ENERGY PARTS SOLUTIONS ENTERS EQUIPMENT SUPPLY MARKET New Company is Global Provider of Energy Parts & Equipment for Power Plants**

Energy Parts Solutions has entered the energy equipment industry, offering an extensive inventory to both domestic and international customers.

Because of the critical nature of quick turnaround in the energy industry, Energy Parts Solutions brings a unique, two-prong approach to the market. The new global supply house stocks a vast array of LM, industrial gas turbine and package parts to help power providers maintain operations and repair outages with minimal downtime. In addition to its inventory depth, Energy Parts Solutions offers 24/7/365 service with same-day quotes and same- or next-day shipping from its Missouri and California distribution centers.

Because of its strong relationships with key companies in the energy industry, Energy Parts Solutions has quick access to parts from the industry's top manufacturers, including Pratt, GE and Siemens Westinghouse.

In addition to rotatable inventory, Energy Parts Solutions also stocks overhauled and serviceable inventory. Through its strategic alliances with industry recognized vendors, EPS supplies parts and equipment to the energy industry at competitive prices.

More information on Energy Parts Solutions, a division of ProEnergy Services, is available on its web site at [www.energy-parts.com](http://www.energy-parts.com).

ProEnergy provides integrated services to industrial customers throughout the region and to the global energy industry. The company has U.S. offices in Sedalia, Mo.; Atlanta; Houston; and Tulsa and overseas locations in Argentina, Mexico, Venezuela, Pakistan, Panama and Ghana. More information is available on its website at [www.proenergyservices.com](http://www.proenergyservices.com).
