PROENERGY OPENS OFFICE IN TANZANIA

ProEnergy, a third-party provider to the energy industry, recently announced the opening of a site office in Tanzania.

ProEnergy is handling multiple projects in the East African nation. It initially constructed four trailer-mounted 2500 gas turbines capable of producing 20 megawatts each on multiple sites. Another LM 6000 capable of producing 50 megawatts will be completed this summer.

The projects, which were turn-key engineering, procurement and construction contracts, were done for a private investor selling power to Tensco. ProEnergy has a two-year operations and maintenance agreement for the project.

Tanzania, which borders the Indian Ocean and is home to Mount Kilimanjaro, Africa's highest peak, is in an extreme power shortage due to its reliance on hydro-electric power and the country's current drought conditions.

ProEnergy provides cost-effective, safe and reliable service in the energy industry and is responsible for the construction, management and maintenance of energy generation facilities and equipment throughout the world. It also services a variety of manufacturers, with a niche in the ethanol industry. The company is unique in that it operates on both local and global levels.

In addition to its headquarters in Sedalia, MO, ProEnergy has offices in Atlanta, Houston, Mexico, Venezuela and Argentina. More information about ProEnergy is available on its website at www.proenergyservices.com.
